Reviewer’s report

Title: Implementation of a novel population panel management curriculum among interprofessional health care trainees

Version: 0 Date: 10 Aug 2017

Reviewer: Martin Veysey

Reviewer’s report:

This is a good study that covers an important topic, how to work in teams when managing patients with complex co-morbidities. The only limitation is the imbalance in the groups that participated in the study.

The study was supervised by a physician and a pharmacist. Most of the trainees were medics, with the next largest group being nurses and only a small number of pharmacy trainees being involved. This does not reflect the usual work-place and as such the composition of each group may have been important in determining the outcome. The balance of the groups for each event should be described and the limitations of their composition discussed.

Were there any negative comments from the participants either as part of the reported evaluation or directly to the supervisors? if so these should be included in the manuscript to give a balanced view of the curriculum implementation.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
