Title: Informed consent procedure in a double blind randomized anthelminthic trial on Pemba Island, Tanzania: do pamphlet and information session increase caregivers knowledge?

Version: 0 Date: 05 Jun 2019

Reviewer: Sarah Wood

Reviewer's report:

The purpose, methods, and results of the study were clear. At times the quality of the English writing compromised the comprehensibility. Table 2 is confusing and should be re-organized, or at least the bolded question "How well did you understand it?" should be moved up so it is apparent that "not at all" is an answer to that question and not the previous one. The limitations and potential confounds of the study were discussed well, which were particularly important to note given the setting in which the study was conducted.
