Title: Justified Granulation Aided Noninvasive Liver Fibrosis Classification System

Version: 4  Date: 30 December 2014

Reviewer: Mortada El-Shabrawi

Reviewer's report:

Refereeing: Justified granulation aided noninvasive liver fibrosis classification system:

- Although it is a very interesting research for clinicians, validation of the complicated equations and formulas must be done by specialized mathematicians and/or statisticians before publishing such wonderful conclusions.
- Needs a lot of grammar and language revision.

- Abstract
  1. According to the World Health Organization 130–150 million of peoples globally are chronically infected with hepatitis C virus…. this number might be an underestimation, it needs a Reference.

- Method:
  1. How 33 different blood attributes collected and 8 of them have been eliminated from the set, leaving 26 of them? How? Is it because age was further eliminated? Explain.
- A
- Table. 2. Liver fibrosis medical data distribution..Liver
