Reviewer's report

Title: Knowledge and Attitudes of Doctors towards E-Health Use in Healthcare Delivery in Government and Private Hospitals in Northern Uganda

Version: 2 Date: 11 June 2015

Reviewer: Ton Spil

Reviewer's report:

major revisions
Clearly show the relationships within the model you used. Rogers work is mainly used qualitative, a good exception is Zhang et al 2015 (health services).
It is hard to believe that even in a n African context relative advantage is not an important determinant of e-health adoption. Maybe it is because they just cannot access or imagine these services?
Also show the skills questions.
The literature study fails a good line of reasoning. I cannot see which search items you used and cannot see how you came to these set of papers.
Using UTAUT model with facilitating conditions as determinator seems better but probably cannot be repaired.

Minor revisions:
It seems the discussion is more or less a second literature study which makes the structure of the paper hard to follow

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
