Reviewer's report

Title: Leveraging workflow control patterns in the domain of clinical practice guidelines

Version: 4 Date: 15 July 2015

Reviewer: Dionisio Acosta

Reviewer's report:

The authors have addressed my specific comments regarding the unsuitability of multiple instance and multiple execution patterns to a satisfactory level. The authors could consider commenting in the further research section on the suitability of these pattern in actual implementations, where fully automated guidance, seamlessly integrated with EHR systems and without additional manual data input, would constitute a success factor for technology uptake.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
