Reviewer’s report

Title: Development process of a mobile electronic medical record for nurses. A single case study.

Version: 1 Date: 24 Aug 2018

Reviewer: Reviewer 2

Reviewer's report:

PEER REVIEWER COMMENTS: To view the full report from the academic peer reviewer, please see the attached file.

REVIEWER COMMENTS FROM REPORT: Overall:

A very useful subject - too often, we read only about the success stories. An analysis of a failed system is equally as, if not more, important. Very well executed.

Done well:

Description of the initial problem, and idea.

Description of the theoretical model to be used in the evaluation.

Research method, beginning with a scan of relevant documents, followed by selection of interviewees (so often, only managerial and above and champions are interviewed), and good follow-up.

Observation of actual usage of the app by the user, and then triangulation with other data.

Not done well:

Nothing. The authors have done well. I look forward to seeing this article published.

REQUESTED REVISIONS:

None
ADDITIONAL REQUESTS/SUGGESTIONS:

None.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
