Title: QL4MDR: A GraphQL Query Language for ISO 11179-based Metadata Repositories

Version: 0  Date: 04 Dec 2018

Reviewer's report:

While the idea of the research is interesting from a data integration standpoint, the authors did not provide enough motivation. I suggest that they use a motivating example and walk through it in the discussion that follows to show how the system they propose helps what they claim. The claims made in the abstract are not adequately substantiated. They will also need to establish novelty by comparing their system with similar research prototypes. The related research section is truly poor. It was at all not possible to fish out the benefits and novelty of the system proposed.
