Title: The use of echocardiographic and clinical data recorded on admission to simplify decision making for elective percutaneous coronary intervention: A prospective cohort study

Version: 0 Date: 08 Jan 2019

Reviewer: Georgy Kopanitsa

Reviewer's report:

The manuscript describes a very important research based on the combination of echocardiographic and clinical data recorded on admission to simplify decision making for elective percutaneous coronary intervention. This is a very important topic because combining these two types of data can improve the quality of the clinical decision making.

The manuscript is well structured and written. I would suggest to improve the language before accepting it for publication.
