Reviewer’s report

Title: Improving health information systems during an emergency: lessons and recommendations from an Ebola Treatment Centre in Sierra Leone

Version: 2 Date: 11 Feb 2019

Reviewer: Elizabeth Cummings

Reviewer's report:

Generally, the paper is significantly improved since previous review. There remain a few minor suggested changes.

Abstract - every sentence in the methods section of the abstract starts with "We". Consider changing this to improve readability. There is a significant use of the word "we" throughout the paper and whilst this is not a problem generally it would be useful for the authors to reflect upon the potential to overuse it when other more descriptive terms could be used.

You have labelled both panels as panel 1

I suggest reassessing the use of numbering throughout the document. For example, the sections on Implementing the medical records has a number of different level numbering within the text. It is confusing.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
