Title: Evaluating users' experiences of electronic prescribing systems in relation to patient safety: a mixed methods study

Version: 0 Date: 14 Mar 2020

Reviewer: Yuan Zhou

Reviewer's report:

The authors studied the how the UI design of the EP system would affect users' experiences and provided suggestions for improvement. Overall, the manuscript is well written. I only have two minor comments: 1. In addition to the mean number of fixations provided in Table 1, please also provide the standard deviations (or confidence intervals) to show the variations across different participants. 2. In the Abstract/Results, "Study 1 showed increased visual attention toward ....", the word "increased" is a bit misleading, as it made me to think if there was an intervention here, which actually not the case. Please use an appropriate word, e.g., great, much, etc.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review
