Title: Russian nursing students' knowledge level and attitudes in the context of HIV

Version: 4 Date: 3 June 2014

Reviewer: Özgül Erol

Reviewer's report:

Thank you for giving me the opportunity to review this paper. It is an interesting and valuable article. Here are some suggestions about the paper:

1. Abbreviations are used (HIV, AIDS, ARVT, PLWA) but their opening forms were not given. They could be added.

2. There is a need of much information about HIV in the world. General information about HIV in Russia is given much more.

3. In methods section, Cronbach alpha levels could be two digits after dot.

4. In discussion section, it was determined that purposive sampling was used. It could be mentioned in methods section.

5. Reference 4 is deficient.

6. Abbreviations of Journal names should be used in reference section.

7. Tables given were all related with percentages. Other statistical results could be also added.
