Many thanks for this interesting paper, which attempts to expand our thinking around repositioning for the prevention of pressure ulcers. The main point of comment that I have is that it is not clear from the description in the paper, what exactly is meant by lying in neutral, as such specific clarity around this term is needed. In addition explanation, for the purpose of this paper, as to what is meant by conventional positioning is needed, as it is likely that this is not uniformly the same across different clinical settings. The conclusion of the paper needs greater clarity, i.e. which exact position should be tested further? (30 degree LiN?)

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
