Reviewer’s report

Title: Developing and Evaluating an Instrument to Measure Recovery After INtensive care: The RAIN instrument

Version: 0 Date: 08 Nov 2017

Reviewer: Elisa Ambrosi

Reviewer's report:

Overall

Many thanks for a very interesting topic which is relevant for ICU patients. Overall your manuscript did not convince me that your questionnaire add something new compared to previous ones. I found that the paper is more focused on the instrument's evaluation and less on the developing process.

Specifically

Introduction: I think that the description of the recovery concept should be the first paragraph of the paper in order to introduce the topic. Then, the introduction should be more argumented, in the present form it seems more a list of the results of previous studies.

Methods: I was expecting a more detailed description of the questionnaire's development and especially of the "new dimensions".

Discussion: also in this section I was expecting a more in-depth discussion of your "new knowledge".

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review

Quality of written English
