Reviewer’s report

Title: Patients’ perception of quality of nursing care; a tertiary center experience from Ethiopia

Version: 1 Date: 01 May 2019

Reviewer: Souraya Sidani

Reviewer's report:

Please, note that "data" is plural.

The eligibility criteria could be described in full sentences (rather than listed).

In the data analysis section:
- The sentence "the information obtained from the patients was interpreted separately and in combination based on their contribution to quality nursing care" is unclear.
- Please, clearly identify the predictors of satisfaction and the respective measure in the Measurement section
- Please, provide a rationale for not examining differences across units.

In the Results section:
- It would be useful to provide a description of participants demographic and health / clinical characteristics.
- The factors reported to predict overall satisfaction appear to be subscales of the satisfaction measure - please clarify this point and justify the selection of these factors, which are conceptually viewed as domains of satisfaction (rather than predictors)
- The independent variables included in the multivariate logistic regression have not been presented in previous sections of the manuscript and it is unclear how they were measured.
