The objective of the study was not clear and also was not clear when the authors described about "nurses' perceptions of patient safety culture (POPSC)". Why was included the year of the study in the objective?

The purpose and method of the study were not clearly described. It will be necessary to review the type of study, sample size calculation, and study inclusion and exclusion criteria, as many of the criteria presented are not considered inclusion or exclusion criteria. For example; "incomplete questionnaire and inclination to participate in the study", etc.

The authors also did not mention the ethical aspects of the research.

The description of the HSOPSC instrument and the way it was analyzed was not understandable. The analysis of the instrument could be revised for clarity.

Are the methods appropriate and well described?
