Reviewer’s report

**Title:** The Role of Institutions in the Effectiveness of Malaria Treatment in the Ghanaian Health Sector

**Version:** 6  
**Date:** 9 September 2014

**Reviewer:** Supasit Pannarunothai

**Reviewer’s report:**

The paper provides better transparency to sample selection and statistical analysis. At least two errors are detected. The odds ratio of number of doctors (0.99) was very close to 1, it suggests that it should not be statistically significant as confirmed by confidence interval but p value reported 0.04. The other error was odds 0.57 in table 3 for regional hospital but in the text is 0.58.

**Level of interest:** An article of importance in its field

**Quality of written English:** Needs some language corrections before being published

**Statistical review:** Yes, and I have assessed the statistics in my report.

**Declaration of competing interests:**

I declare that I have no competing interests.
