Reviewer's report

Title:A Program Evaluation Report of a Rapid Scale-up of a High-Volume Medical Male Circumcision Site, KwaZulu-Natal, South Africa, 2010-2013

Version:4 Date:4 December 2014

Reviewer:Marc Goldstein

Reviewer's report:

In this version of their article, the authors have described a program created to increase access and education for voluntary male circumcision in Asiphile, South Africa. A team was trained to perform male circumcision by staff from a previously successful male circumcision program. The program was designed to perform 17,000 circumcisions each year. While this number was not reached, the authors showed that they were able to perform approximately 10,000 circumcisions over 3 years, and outlined a program for not only establishing a high volume voluntary male circumcision center, but also for advertising and recruiting patients to their center.

Major revisions: none

Minor revisions:
* Lines 130 - 134 - numbering for the elements listed is incorrect ("3" is used twice, and the grammar after each number is inconsistent)
* Line 194 - please detail/list the adverse events (either in paragraph or table format)

Level of interest:An article whose findings are important to those with closely related research interests

Quality of written English:Acceptable

Statistical review:No, the manuscript does not need to be seen by a statistician.
