Reviewer’s report

Title: The adoption of a new diagnostic technology for tuberculosis in two brazilian cities from the perspective of patients and healthcare workers: a qualitative study

Version: 3
Date: 8 July 2014
Reviewer: Carl Johan Orre

Reviewer’s report:

After a thorough reading of the paper and the report, it is clear that the authors in a good way handled the comments communicated previously. They have held on to the core and strength of the previous version and developed it successfully.

The article deals with an interesting case and presents results that are well-researched and interesting. I can only recommend it for publication with mandatory discretionary revisions. Possibly that the transitions between sections in the results section can be written more cohesive and give a clearer legato and fluency in the text in this specific section.
