Reviewer's report

Title: Exploring the treatment delay in the care of patients with ST-elevation myocardial infarction undergoing acute percutaneous coronary intervention: a cross-sectional study

Version: 3 Date: 24 April 2015

Reviewer: Matthias Hochadel

Reviewer's report:

Minor Essential Revisions

#1: The presentation of the data is much more transparent and convincing now. The methods and limitations have been described more accurately. Interhospital transfer is identified as a determinant of a prolonged treatment delay, whereas in table 2 treatment delays are shorter for patients who were transferred between hospitals. Is this correct, or how can the discrepancy be explained?

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
