Reviewer’s report

Title: Costs and utilization of treatment in patients with hemophilia

Version: 5
Date: 28 September 2015

Reviewer: Declan Noone

Reviewer’s report:

Minor Essential Revisions

Pg 10 Line 23 and Page 11 Line 4 - Remove Dates of births of the children. There is no need for these. I would suggest remove completely or just put in the age

Discretionary Revision

Pg 12 Line 4 "will become available, which will initially be higher in price and therefore be associated with higher costs. ". It is up to the authors if they want to change this but in the US the the pricing has been set so that although the price/IU will be increased in theory the annual cost of clotting factor should remain the same.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
