Reviewer’s report

Title: Implementing a best-practice model of gestational diabetes mellitus care in dietetics: a qualitative study

Version: 0 Date: 02 Oct 2018

Reviewer: Reviewer 2

Reviewer's report:

PEER REVIEWER COMMENTS: To view the full report from the academic peer reviewer, please see the attached file.

REVIEWER COMMENTS FROM REPORT: The study is limited by very small group of study participants. Aims/objectives are confusing. Led to believe that this paper would provide more insights on how a theoretical model was used to guide the interview process—which would have been interesting.

REQUESTED REVISIONS:

Study objective: The described aim of this paper is to describe the experience of stakeholders involved in the implementation of best practice MNT and identify learnings to inform implementation at other sites. Although this is stated as the aim—early on—the reader is led to understand that the manuscript will provide insights on how a theoretical driven model is used to gain insights into program facilitation. With only 8 people interviewed, many of them with nutrition backgrounds and most likely already supportive of MNT interventions, findings cannot be widely interpreted, and for this qualitative study—the findings are limited.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
