Reviewer’s report

Title: Factors Associated with Health Literacy in Rural Areas of Central China: Structural Equation Model

Version: 2 Date: 23 Feb 2019

Reviewer: German Malaga

Reviewer's report:

An important factor associated with HL and that has been reported as significant, but that was not discussed is the educational level, I believe that it would benefit in the understanding of the article.

The conclusion of the abstract is much more focused than that of the article, it gives me the impression that ends up wandering and making assumptions not concordant with the results shown in results and discussion and above all, taking into account the nature of the type of study.

The finding of association of HL and obesity, is highlighted in the discussion, I believe that due to its potential importance, it could be considered mention in the conclusions

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
