Reviewer’s report

Title: Canonical correlations between individual self-efficacy/organizational bottom-up approach and perceived barriers to reporting medication errors: A multicenter study

Version: 0 Date: 28 Jan 2019

Reviewer: Seyda Seren Intepeler

Reviewer's report:

Dear Author(s),

Thank you for your paper actual and important for the patient safety area. Under the title of "individual self-efficacy; knowledge of medication administration" should be explained why only high-alert medication. Medication administration is large topic. The KR-20 value is specified as .62 (20-item questionnaire about "knowledge of high-alert medication"), but this value is low and this situation should be included in the limitations part. Although the topic is up to date, most of the references before 2014, it could be update. Most of the discussion should be focused on clinical decision making, especially focused on the second research question and findings, should be revised. "nurse-physician collaboration satisfaction questionnaire" and "The barriers to reporting MAEs instrument" verified results should be given.

Best wishes.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review
