Reviewer’s report

Title: Experience gained from the implementation of the Saudi Trauma Registry (STAR)

Version: 0 Date: 03 Oct 2019

Reviewer: Puspa Raj Pant

Reviewer's report:

1. Although it fits well, the reference 2 (lines 3-5) gives a feeling that Trauma caused only by Road Traffic Crashes! Authors may wish to consider additional reference. Something to add from GACI and https://www.who.int/emergencycare/trauma/global_forum_meeting_report.pdf?ua=1

2. Understandably table 1 is not inline to the text because its large but I would suggest to signpost the Table Title only at appropriate place.

3. Table 2. Numbering of the criteria: #2, #3, #4 and #5 seems to be subheadings.

4. Table 3. why the ? used in the variable "? Traffic event"

Table 3. Is "Traffic event" not a sub-category of "cause of injur", other descriptors should come as a subhead

Table 3. The items in the table can be reorganised in a logical flow! e.g. place of injury should come under "injury location" etc

Table 3. "Descriptions of other" it would be helpful if authors describe relative higher errors encountered in the Discussion section!?
Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

Not relevant to this manuscript

Quality of written English
Please indicate the quality of language in the manuscript:
