Reviewer's report

Title: Willingness to administer mouth-to-mouth ventilation in a first response program in rural Bangladesh

Version: 3  Date: 18 January 2015

Reviewer: Hideo Inaba

Reviewer's report:

Major
Multivariable logistic regression analysis should be conducted to confirm the results of univariable analysis.

Minor
1) The authors should state how frequent drowning is in Bangladesh and how important ventilation is.
2) The previous studies regarding willingness to perform ventilation to victims with drowning should be searched and list them in References.
3) Similarly, the gender gap in willingness to perform CPR should be searched and listed

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
