Title: Mental, neurological, and substance use problems among refugees in primary health care: analysis of the Health Information System in 90 refugee camps

Version: 3  Date: 5 November 2014

Reviewer: Matthew Friedman

Reviewer's report:

Major Compulsory Revisions: None

Discretionary Revisions: The manuscript is considerably improved and the authors have been responsive to feedback. I remain concerned that the authors still have not pointed out the obvious problem with the WHO classification scheme since the same diagnostic entity could be classified either as "a severe emotional disorder or as "other psychological complaint." There don't seem to be any guidelines about where to draw the line so it may depend entirely on who happens to be the observer at the time. Because of this there is room for improvement regarding the linkage between epidemiological data presented in Introduction and the utilization addressed data in Discussion.

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
