Title: Comparative safety of serotonin (5-HT3) receptor antagonists in patients undergoing surgery: A systematic review and network meta-analysis

Version: 1 Date: 12 January 2015

Reviewer: Saurav Chatterjee

Reviewer’s report:

Discretionary Revisions
The network meta-analysis methods appear adequate. No further suggestions except that authors state that they only used Frequentist analysis, while it's recommended to perform both frequentist and Bayesian with corresponding reporting of both including reporting of the prediction intervals.

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
