Reviewer's report

Title: Building a learning community of Australian clinical genomics: a social network study of the Australian Genomic Health Alliance

Version: 1 Date: 21 Jan 2019

Reviewer: Petr Matous

Reviewer's report:

The recommendations would benefit most from additional revision to make the paper stronger and more practically useful. What implications and practical recommendations can be provided that could not be provided without this study? The recommendations start with "The observation from our study that learning is predominantly a self-directed, social process has implications...". Which findings and what type of networks would you need to obtain for the observation from your study to be that learning is predominantly NOT a social process and that genomic networks should NOT be encouraging the formation of interdisciplinary communities? How do the findings imply that there is no quick way to up-skill...? Clarifying implications that are directly based on the authors' original results will increase the value of the paper. I wish the authors a speedy publication.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
Quality of written English
Please indicate the quality of language in the manuscript:

Declaration of competing interests
Please complete a declaration of competing interests, considering the following questions:

1. Have you in the past five years received reimbursements, fees, funding, or salary from an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

2. Do you hold any stocks or shares in an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

3. Do you hold or are you currently applying for any patents relating to the content of the manuscript?

4. Have you received reimbursements, fees, funding, or salary from an organization that holds or has applied for patents relating to the content of the manuscript?

5. Do you have any other financial competing interests?

6. Do you have any non-financial competing interests in relation to this paper?

If you can answer no to all of the above, write 'I declare that I have no competing interests' below. If your reply is yes to any, please give details below.

no COI

Statement on potential review bias
Please complete a statement on potential review bias, considering the following questions:

1. Did you co-author any publication with an author of this manuscript in the last 5 years?

2. Are you currently or recently affiliated at the same institution as an author of this manuscript?

If you can answer no to all of the above, write 'I declare that I did not publish with these authors in the last 5 years and also meet the affiliation criteria". If your reply is yes to any, please give details below.
