Reviewer’s report

Title: Profiling the best-performing community medicine distributors for mass drug administration: a comprehensive, data-driven analysis of treatment for schistosomiasis, lymphatic filariasis, and soil-transmitted helminths in Uganda

Version: 0 Date: 20 Nov 2018

Reviewer: Benson O. Singa

Reviewer's report:

This is a very interesting paper and brings out some interesting aspects over the selection criteria for CMDs. The methods are clear and conclusions from this data seems clear enough.

However, one thing that has not come out in the paper is the characteristics of the CMDs who apparently did not treat anyone. I think that though they may be few comparatively, they contribute to the low treatment rates within their villages and perhaps should be actively eliminated during the selection of the CMDs.

I think this a very informative paper
Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Not applicable

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review

Quality of written English
