Reviewer’s report

Title: Implementation of genotype-guided dosing of warfarin with point-of-care genetic testing in three UK clinics: a matched-cohort study

Version: 0 Date: 27 Feb 2019

Reviewer: Paulo Caleb Júnior Lima Santos

Reviewer's report:

This reports on implementation study that explored the implications of implementing into clinical practice a genotype-guided approach to dosing the oral anticoagulant warfarin.

To change GGD letters because it didi not indicate point-of-care genotyping information.

In the Results from Abstract: to show values for 2 groups and not only the difference.

Discussion: statistical power was calculated before; but number of patients was small, thus, this limitation can be included in the Discussion too. Maybe, as limitation, some used questions are not validated, previously.

Table 1: p values must be reported, comparing 2 groups.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
Quality of written English
