Reviewer’s report

Title: Optimising trial designs for identifying appropriate antibiotic treatment durations

Version: 2 Date: 19 Apr 2019

Reviewer: Mical Paul

Reviewer's report:

Line 132-137 - In the paragraph on DOOR/RADAR the authors conclude that "its ranking assumes that the shorter of two durations is beneficial" and "this unverified strong assumption could lead to demonstration of non-inferiority using DOOR/RADAR when conventional trial designs may show that shorter durations are not non-inferior." - I believe this is incorrect since in the DOOR/RADAR approach first the clinical patient-relevant outcomes are compared. Only if no difference in these is detected, will the duration come into play with the shorter duration gaining. The condition for the latter is that there is no difference in clinical outcomes between the short and long treatment duration.
