Title: Novel secreto-transcriptome integrated or secreto-transcriptomic approach to reveal liquid biopsy biomarkers for predicting individualized prognosis of breast cancer patients

Version: 0 Date: 28 Jan 2019

Reviewer: Gagan Deep

Reviewer's report:

Present manuscript introduces a new multi-omics (secreto-transcriptomics) method that identifies candidate markers of BC subtypes in their oncogenically secreted states. Proposed secreto-transcriptomic approach statistically links BC subtypic secretome genes with patient-specific information about their mRNA expression alterations and might significantly improves the sensitivity and specificity in patient stratification in the context of clinical outcomes. This is a well written manuscript and is of high significance as we need non-invasive biomarkers and approaches to better manage cancer. I have only a minor concern: Authors should improve the quality of figure 1 as several panels are not clear. Also, Authors should clearly describe this figure in the manuscript.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review
Quality of written English
