Reviewer's report

Title: The association between dietary selenium intake and diabetes: A cross-sectional study among middle-aged and elderly adults

Version: 2 Date: 20 January 2015

Reviewer: Saverio Stranges

Reviewer's report:

The authors have addressed the major issues raised in the previous round of revisions. As a result, the manuscript is much improved. However, the English language could be further improved in the next stages of the editorial process. Also, the average level of dietary selenium intake reported in the concluding remarks was different than the numbers reported in the abstract and results' sections. Please clarify this issue.

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
