Title: Associations of childhood, maternal and household dietary patterns with childhood stunting in Ethiopia: Proposing an alternative and plausible dietary analysis method to dietary diversity scores

Version: 1  Date: 01 Jan 2018

Reviewer: Debbie Humphries

Reviewer's report:

Thanks for your thorough response to previous comments.

Additional minor comments -

Line 70 - "DDSs were useful indicators of micronutrients" should be 'indicators of micronutrient status'

Line 260-262 - "There was a marginally significant statistical difference in the proportion of stunting was found" - either drop the 'there was' and start sentence with "A marginally significant" or drop the "was found" later in the sentence.

Line 361 - subject-verb number disagreement - "measures taken" … "is a major strength" should be 'are a major strength'
