Reviewer’s report

Title: Estimating mean population salt intake in Fiji and Samoa using spot urine samples

Version: 1 Date: 14 Aug 2019

Reviewer: Dinesh Neupane

Reviewer's report:

The authors have done a commendable job in revising the whole article. Regarding comment on total creatinine excretion, authors still mentioned that >25 mmol/day for men and >30 mmol/day for men were excluded because of incomplete urine collection. High creatinine level is the indication of over collection (more than 24 hours) not the incomplete collection.
