Reviewer's report:

The results of this research work are of interest and provide information that will allow us to advance in this field, I believe it should be published. With the following suggestion it is possible that the results are more complete.

In the methods and results section, the variables of relative humidity and temperature are mentioned, the expected thing is to find a brief explanation of what happens with them or because they are included in the analysis, this can be justified by adding a short text explaining that there are studies that show that these variables, in particular the ambient temperature, influence the variables of the circulatory system, add some references, for example.
