Reviewers report

Title: Evaluation of sepsis induced cardiac dysfunction as a predictor of mortality

Version: 0  Date: 20 Oct 2018

Reviewer: Pavel Dimitrow

Reviewers report:

Both hypovolemia induced by vasodilatation and/or fever as well as tachycardia frequently develope in sepsis. Both these hemodynamiv abnormalities may provoke left ventricular out flow tract gradient. Do authors measured compared between subgroups LVOT gradient. Do you measure heart rate during LVOT gradient. If yes, please provide findings and discus this problem in discussion section

Level of interest
Please indicate how interesting you found the manuscript:

An article whose findings are important to those with closely related research interests

Quality of written English
Please indicate the quality of language in the manuscript:

Acceptable

Declaration of competing interests
Please complete a declaration of competing interests, considering the following questions:

1. Have you in the past five years received reimbursements, fees, funding, or salary from an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

2. Do you hold any stocks or shares in an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

3. Do you hold or are you currently applying for any patents relating to the content of the manuscript?

4. Have you received reimbursements, fees, funding, or salary from an organization that holds or has applied for patents relating to the content of the manuscript?

5. Do you have any other financial competing interests?

6. Do you have any non-financial competing interests in relation to this paper?
If you can answer no to all of the above, write 'I declare that I have no competing interests' below. If your reply is yes to any, please give details below.

I declare that I have no competing interests’
