Reviewer’s report

Title: Global Longitudinal Strain is a more reproducible Measure of Left Ventricular Function than Ejection Fraction regardless of Echocardiographic Training

Version: 0 Date: 04 Jul 2019

Reviewer: Erwan Donal

Reviewer's report:

the authors did a nice work.

except the relative lack of "originality" of the proposed data, no important comment from my side.

For increasing the value and the originality of the manuscript and to be up to date and different from the paper from the existing literature, it would be nice to assess the reproducibility of the dispersion in addition to GLS of course the automatic asessment of the LVEF is something that has already be pointed out...
