Reviewer’s report

Title: Workforce Patterns in the Prevention of Mother to Child Transmission of HIV in Côte d'Ivoire: A Qualitative Model

Version: 1 Date: 18 Dec 2017

Reviewer: Helga Naburi

Reviewer’s report:

Most of my comments have been addressed adequately. In the attached manuscript, still have minor comments on this sentence "Additionally, under Option B, infants receive prophylaxis for 4-6 weeks regardless of feeding method (and if breastfeeding prophylaxis prophylaxis is continued beyond 6 weeks), whereas with Option A infants who were not breastfeeding did not receive prophylaxis at all"

According to WHO with both option A and Option B it was recommended to give prophylaxis for 4-6 weeks regardless of breastfeeding status, then with option A infant would continue with prophylaxis until the risk period (breastfeeding) was over, while with Option B infants would stop prophylaxis at 6 weeks and mother continue with triple therapy.

According to the author Option A infants who were not breastfeeding did not receive prophylaxis at all" it would be important to clarify if this was the country specific policy. Once this minor comment has been clarified then I have no further comments.

Level of interest
Please indicate how interesting you found the manuscript:

An article of importance in its field
