Reviewer’s report

Title: Multivariable regression analysis of list experiment data on abortion: results from a large, randomly-selected population based study in Liberia

Version: 1 Date: 16 Sep 2017

Reviewer: Elard Koch

Reviewer's report:

Authors addressed major questions such as the association between women's education level and abortion found in this study. Future research to clarify if reverse causality is really present will be required (current study design cannot adequately solve this research question, and authors acknowledged limitations)

Level of interest
Please indicate how interesting you found the manuscript:

An article whose findings are important to those with closely related research interests

Quality of written English
Please indicate the quality of language in the manuscript:

Declaration of competing interests
Please complete a declaration of competing interests, considering the following questions:

1. Have you in the past five years received reimbursements, fees, funding, or salary from an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

2. Do you hold any stocks or shares in an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

3. Do you hold or are you currently applying for any patents relating to the content of the manuscript?

4. Have you received reimbursements, fees, funding, or salary from an organization that holds or has applied for patents relating to the content of the manuscript?

5. Do you have any other financial competing interests?

6. Do you have any non-financial competing interests in relation to this paper?
If you can answer no to all of the above, write 'I declare that I have no competing interests' below. If your reply is yes to any, please give details below.

I declare that I have no competing interests.
