Reviewer’s report

Title: Maternal overweight and obesity and the risk of caesarean birth in Malawi. Analysis of population-based surveys

Version: 0 Date: 10 Dec 2018

Reviewer: Ishag Adam

Reviewer’s report:

It is not clear when the BMI was taken? It is seems to be it was taken during the survey itself. Therefore it is taken at the different time perhaps many months after cesarean was performed.

This point needs to be clarified and perhaps it is one of the limitations of the study.

I believe that many women have more than cesarean delivery during the survey. Were these considered two cases or as one case?
