Title: Vitamin D and assisted reproductive treatment outcome: A prospective cohort study

Version: 0 Date: 19 May 2019

Reviewer: Ali Montazeri

Reviewer’s report:

In general the paper reads well and merits publication. However, there are a few minor points that should be dealt with before its publication.

1. Reproductive outcomes or reproductive treatment outcomes. Please be clear and consistent through out the manuscript.

Perhaps it might be better to define this somewhere in the method section.

2. The main problem with this paper is the fact that there is no significant association between vitamin D consumption and reproductive outcomes after adjustment for prognostic factors. Thus this should be clearly indicated. At present the Conclusion in the Abstract and in the text are misleading.

3. Using references for Conclusion is odd and this should be revised.
