Reviewer’s report

Title: Enamel surface alterations after repeated conditioning with HCl

Version: 2 Date: 27 August 2015

Reviewer: Yannicke DAUPHIN

Reviewer’s report:

The manuscript has been improved so that it deserves to be published in the present state.

Nevertheless, I wish to confirm that the P and Ca contents of the tooth play a role in the decalcification result, and that the age of the individual also plays a role because the outer layer of the enamel is more or less eroded,

So, the authors must take into account such parameters in their future studies.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
