Title: Effect Of Submucosal Application of Tramadol on Postoperative Pain After Third Molar Surgery

Version: 4 Date: 11 August 2015

Reviewer: Mario Isiordia

Reviewer's report:

The authors carried out the most of the recommended changes. However, the information in Figure 1 which corresponds to high blood pressure, heart rate and oxygen saturation should be changed to a table where the data can be observed as mean and standard deviation because the graph included in this paper is unclear.

After making this change, I suggest accepting the paper for publication in the Head and Face Medicine.
