Reviewer’s report

Title: Does the Usage of Platelet Rich Fibrin Reduces the Pain and Swelling after Impacted Third Molar Surgery? Randomised multicenter Clinical Study

Version: 2 Date: 7 July 2015

Reviewer: Mehdi Gholami

Reviewer’s report:

Minor Essential Revisions:
1. Was the examiner blinded to the study?
2. Were all wisdom teeth fully impacted? If not, primary closure would be difficult or impossible.

Discretionary Revisions:
1. It would be better to use a 3-dimensional (3D) optical scanner to measure facial swelling in volume.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
