Reviewer’s report

Title: A new concept for implant-borne dental rehabilitation or how to overcome the biological weak-spot of conventional dental implants?

Version: 0 Date: 28 Nov 2016

Reviewer: Ashkan Rashad

Reviewer's report:

Dear Editor, thanks for asking me to review the article entitled „A new concept for implant-borne dental rehabilitation or how to overcome the biological weak-spot of conventional dental implants?“.

The article contains a well known topic which was already described decades ago. The authors described a new method to fixate well known subperiostal implants using the selective laser melting method and fixation screws. The language used in this article should be corrected by a native speaker. Statistical analyses are not needed. The reviewer recommends a better labelling of the figure legends. That will make the article easier to read. Otherwise a good article that merits publication, the reviewer will recommend to publish the paper after discrational revisions. The only issue need to be mention is that the authors should add more recent references.

Level of interest
