Reviewer’s report

Title: Evaluation of piezocision and laser-assisted flapless corticotomy in the acceleration of canine retraction: A Randomized Controlled Trial

Version: 0 Date: 20 Dec 2017

Reviewer: Manuel Lagravere

Reviewer’s report:

Authors present a study comparing retraction methods of canines. The authors seem to have done a well made trial. Some issues that can be addressed are the measurement error of all the distances and angles measured is missing, this is important to have to see the real impact of change. Also, it would be nice to have the rate of retraction in terms of percentage rate of movement.

Was there any blinding when measuring the models? This is important because it can incorporate a huge bias.

Level of interest
Please indicate how interesting you found the manuscript:

An article of importance in its field

Declaration of competing interests
Please complete a declaration of competing interests, considering the following questions:

1. Have you in the past five years received reimbursements, fees, funding, or salary from an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

2. Do you hold any stocks or shares in an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

3. Do you hold or are you currently applying for any patents relating to the content of the manuscript?

4. Have you received reimbursements, fees, funding, or salary from an organization that holds or has applied for patents relating to the content of the manuscript?

5. Do you have any other financial competing interests?

6. Do you have any non-financial competing interests in relation to this paper?
If you can answer no to all of the above, write 'I declare that I have no competing interests' below. If your reply is yes to any, please give details below.
