Reviewer’s report

Title: Errors according to the number of registered markers used in navigation-assisted surgery of the mandible

Version: 0 Date: 02 Sep 2018

Reviewer: Jan Rustemeyer

Reviewer’s report:

Authors checked the accuracies of two navigation planning systems and compared them with each other. The study is limited to tracing mandibular points on an idealized model.

However, study design is well-done. Methods are clear presented with the help of numerous figures.

Since one issue might be that the study presents an in vitro model, this study might be the basis for further clinical trials.

Level of interest
Please indicate how interesting you found the manuscript:

An article whose findings are important to those with closely related research interests

Declaration of competing interests
Please complete a declaration of competing interests, considering the following questions:

1. Have you in the past five years received reimbursements, fees, funding, or salary from an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

2. Do you hold any stocks or shares in an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

3. Do you hold or are you currently applying for any patents relating to the content of the manuscript?

4. Have you received reimbursements, fees, funding, or salary from an organization that holds or has applied for patents relating to the content of the manuscript?

5. Do you have any other financial competing interests?

6. Do you have any non-financial competing interests in relation to this paper?
If you can answer no to all of the above, write 'I declare that I have no competing interests' below. If your reply is yes to any, please give details below.
