Title: Simultaneous, radiation-free registration of the dentoalveolar position and the face by combining 3D photography with a portable scanner and impression-taking

Version: 1 Date: 07 Aug 2019

Reviewer: Dieter Dirksen

Reviewer's report:

While some general concern about the novelty aspects of the presented study remains, the authors have addressed most of the remarks from the previous review. However, some issues still need to be addressed:

Page 6: "An analysis of the variance of a tenfold repetition of the digital workflow has been performed"

This description is not very precise. The authors should clarify, whether in fact the residual deviations between the intraorally scanned models have been calculated after registering with the extraoral scan body. Which measurement has been used as reference?

Page 8: Units should be added to the numerical values.

For the newly added text, the language should be revised.
