Reviewer’s report

Title: Comparison of the accuracy of different impression procedures in case of multiple and angulated implants

Version: 1 Date: 15 Dec 2019

Reviewer: Christian Mertens

Reviewer's report:

The manuscript has been significantly improved by the authors' revision process. However, some changes should be made to the way the results are presented.

Since they have generated large amounts of data, good visualization is essential. The newly added box-plots figures 9 & 10 are a good way going in the right direction. But optimization is still necessary:

- To understand the figures and tables alone, the abbreviations must be added to the description of the figures/tables
- The data of box-plots (figures 9 & 10) should be grouped/sorted in some way (with respect to different parameters: different angulations / master models? Different impression techniques?)
- A possibility could also be separation in to different smaller boxplots to optimize the understanding.
- It would be good to understand figures 9 & 10 alone without having to read the entire manuscript.
